

8" x 48" LVT HORIZONTAL STAGGERED INSTALLATION

Use half tabs at the walls if needed

8" x 48" LVT HERRING BONE INSTALLATION

Use half tabs at the walls if needed

INSTALLATION METHODS

# INSTALLATION METHOD | LVMax INSTALLATION SYSTEM | Residential and Commercial applications

---

The LVMax tab system is a glue free method which allows the installation of vinyl planks without using adhesive, creating a durable “floating” floor. The major advantages of this system include: - Quicker installation and decreased down time (no need to wait for the glue to dry, easier floor preparation and no mess) - Ease of removal when changing or replacing your vinyl planks - Flexible installation and superior performance in all areas and environments - Can be installed below, on or above grade

LVMax tab Installation system works as easy as peel and stick! Floor & Sub floor preparation: Before installing the vinyl planks your floor must be clean, smooth, leveled and be within the required temperature of 50oF to 90oF(10oC to 32oC).

## EASY TO INSTALL (3 STEPS)

---

- 1. ESTABLISH THE CENTER POINT OF YOUR ROOM** In order to determine the center point of your room, snap chalk lines from opposite corners and from opposite walls. Use a straight edge when snapping the chalk line from opposite walls to ensure the lines form a 90o angle.
- 2. POSITION THE planks** From the center point, and starting from one end of the wall lay your planks to the opposite side. You may need to shift your first row from your base wall to ensure proper fitting and avoid any short tile strips against each wall. The planks can be positioned: Staggered, or Herring Bone.
- 3. LVMax tab PLACEMENT** Each tab has a black silicone center for ease of placement as well for chemical/detergent resistance. After planks are positioned, and starting from one side of the wall, simply lift one corner of the tile and place one section of the LVMax tab (sticky side up) underneath that same corner. The LVMax tab should be placed underneath with atleast 3 tabs on the length of each planks and one meeting at the butting plank. For planks next to a wall cut the LVMax tab in half as needed.
